- Lightning Tracking Network Systems

Company Policy

- We will conduct business in a manner appropriate to building consumer confidence in all areas of weather related products, service and support.
- We will ensure quality parts and equipment are maintained, and competently trained personal are available to assist the consumer at all times.
- We will not engage in any activities that may bring about charges of unfair trading or discriminatory practices involving our customers or employees.
- We will perform only that work which is agreed upon by the customer, and display prices easily seen and understood by all those that use our services.
- We will ensure that all complaints are handled quickly, courteously and responsibly.

What makes us different?

- We focus on solutions; not sales. Our goal is long-term business relationships!
- We attempt to provide logical and cost effective alternatives to a problem. Seldom is there only one solution.
- We discuss pros and cons freely because we can; we don't represent any software or hardware manufacturer or service provider. Our allegiance is to our client.
- We realize that buying the latest advertised technological wonder won't be the answer to most weather related product inquires or environmental monitoring problems. Sales hype is intended to increase sales; not provide solutions.
